## Fiscal Note

June 24, 2025

James Duffy, Fiscal Analyst

### **Act 67 (S.124) – An act relating to miscellaneous agricultural subjects**

As enacted<sup>1,i</sup>

#### **Act Summary**

This act proposes amendments to clarify the responsibilities of the Secretary of Agriculture, Food and Markets and the Secretary of Natural Resources in regulating agricultural water quality on farms. The act clarifies the Agency of Natural Resources' (ANR's) authority to administer Concentrated Animal Feeding Operation (CAFO) regulations under the federal Clean Water Act and amends some requirements administered by the Agency of Agriculture, Food and Markets (AAFM) to ensure consistency with federal law.

#### **Fiscal Impact**

This act has a de minimis fiscal impact on State revenue. It shifts some permitting functions from AAFM to ANR and deposits some future fee revenue to the Environmental Permit Special Fund rather than the Agricultural Water Quality Special Fund. However, the act will not increase total fee revenue.

Based on communications between the Joint Fiscal Office (JFO), AAFM, and ANR, this act is not expected to significantly alter State expenditures, fees paid by regulated entities, or the number of farms subject to permitting requirements.

#### **Background and Details**

This act clarifies the respective responsibilities of ANR and AAFM in regulating agricultural water quality on farms. The act establishes when farms must obtain a CAFO permit from ANR under the federal Clean Water Act and ANR's authority over CAFO permitting.<sup>2</sup>

Currently, certain farm owners and operators must obtain either a Medium Farm Operations (MFO) or Large Farm Operations (LFO) permit from AAFM. MFO and LFO permit holders pay an annual operating fee of \$1,500 or \$2,500, respectively, to the Agricultural Water Quality Special Fund. This fund supports AAFM's inspection and compliance activities.

---

<sup>1</sup> The Joint Fiscal Office (JFO) is a nonpartisan legislative office dedicated to producing unbiased fiscal analysis – this fiscal note is meant to provide information for legislative consideration, not to provide policy recommendations.

<sup>2</sup> The act also clarifies AAFM's responsibility for agricultural nonpoint source pollution control programs. These provisions do not have a fiscal impact.

This act requires some farms with MFO or LFO permits from AAFM to obtain a CAFO permit from ANR. This requirement is to be carried out as follows:

- With assistance from AAFM, ANR will identify MFOs or LFOs that may discharge pollutants into waters of the State.
- If a farm discharge is identified that triggers federal Clean Water Act CAFO permitting requirements, ANR will require the farm owner or operator to obtain a CAFO permit and pay an associated annual fee.
- The CAFO permit fees at ANR will mirror existing MFO and LFO permit fees at AAFM: \$1,500 for medium farms and \$2,500 for large farms. Fee revenue will be deposited into the Environmental Permit Special Fund, which supports ANR's permitting and compliance functions.
- No individual farm will pay both types of permit fees. A farm subject to both MFO/LFO and CAFO permitting requirements will only be required to pay the CAFO permit fee. (LFO permit holders could be required to obtain both permit types but will only pay the CAFO permit fee; MFO permit holders subject to CAFO regulations will only be required to maintain a CAFO permit going forward.)

According to AAFM, there are currently 98 medium farms and 36 large farms with MFO or LFO permits. To the extent MFO or LFO permit holders are required to obtain a CAFO permit, this act will shift revenue from the Agricultural Water Quality Special Fund to the Environmental Permit Special Fund. Since the fee structures are identical and no entity will pay both fees, total State fee revenue will remain unchanged.

To the extent that this change decreases fee revenue for the Agricultural Water Quality Special Fund, it could necessitate an increase in the amount of future transfers needed from the Clean Water Fund to the Agricultural Water Quality Special Fund. However, the amount of revenue generated from MFO and LFO permits is relatively small compared to the size of recent Clean Water Fund transfers. For example, the Agricultural Water Quality Special Fund received \$239,000 in MFO and LFO permit fee revenue in fiscal year 2024, compared to a \$6.68 million transfer from the Clean Water Fund in Act 78 (the fiscal year 2024 appropriations act).
